

IATA Standard Safety Assessment

ISSA Program

We're thrilled to introduce the IATA Standard Safety Assessment (ISSA) Program evolution, designed specifically to cater to operators with small aircraft. Regardless of your fleet size, you can enjoy the benefits of a comprehensive safety assessment brought to you by the International Air Transport Association (IATA).

Why ISSA?

ISSA is tailored to meet the needs of operators with a desire to implement international safety requirements and best practices, and whose aircraft and/or operations does not allow conformity with the IATA Operational Safety Audit (IOSA) requirements because of their business model. The ISSA program is now accessible to a wider range of commercial and non-commercial operators. ISSA standards are derived from the industry's recognized safety audit IOSA.

Program Highlights

- **Global Safety and Operational Standard:** Access a globally recognized safety standard, aligning your operations with relevant IOSA and ICAO requirements.
- **Gradual Implementation of SMS:** Seamlessly integrate Safety Management System (SMS) elements into your operations.
- **Online Registry Access:** Upon successful completion, gain access to the online ISSA Registry, enhancing your visibility and credibility.
- **Commercial Advantages:** Enable improved commercial opportunities by demonstrating conformity with the industry standard.
- **Organizational Efficiency:** Reduction of redundant audits and associated costs, and standardization of operational processes and procedures.
- **Insurance Premium Reduction:** Strengthen your profile to reduce insurance premiums, demonstrating your commitment to meeting industry standards.

Who's Eligible?

ISSA welcomes both, commercial and non-commercial operators, including passenger, cargo, seaplane, amphibian operators, and more. Whether your aircraft operates under IFR or VFR, with single or multiple pilots, ISSA offers a tailored solution for your safety and operational efficiency needs.

The Assessment Process

Led by auditors trained and qualified by IATA, the assessment process includes an offsite document review followed by an onsite assessment. After the completion of the onsite phase, a follow-up process is undertaken to address any findings from the assessment, fostering a culture of continuous improvement.

Raise Your Operational Safety Today

Join us in raising the bar for operational safety. Discover the many advantages of the ISSA Program and embark on a journey towards enhanced safety and efficiency with IATA.
